

# Tuning can liberate your engine's performance

**HARDING** Auto Services is committed to a cleaner environment, not only in its working practices and waste disposal but also in the efficiency of the cars that its maintains.

The company keeps up-to-date with all automotive developments for economy and efficiency.

It believes it is very important to have your car regularly serviced and maintained. This can not only minimise your carbon footprint but also save money on improved fuel economy as well as help prevent future costly repairs.

There are also new technologies now available to further enhance your existing car for improved driveability, efficiency and economy.

After the motoring correspondent Quentin Willson's report on diesel power tuning units, they are literally flying off the shelves.

He gained almost 30% extra economy from his Land Rover Discovery with a DPT unit and considers them the best diesel economy and performance equipment on the market.

As Surrey's only authorised

The Harding team can achieve amazing amounts of increased power from your car.

dealer of DPT units, Harding would be delighted to give you further information.

One of the big advantages of the unit is that it is transferable to your next car, and the cost of fitting is recoverable in 15,000

miles. It has also been approved by Mercedes-Benz.

Harding can also Superchip or remap ECUs, giving amazing results in increased power and torque as well as much more fuel economy.

The performance of your car's engine can be truly liberated. Call Harding Auto Services for further information on 01483 487626 or visit their website, [www.hardingautos.co.uk](http://www.hardingautos.co.uk).

AmD can tailor a car's performance to suit the customer's requirements.

## A market leader in improving power

AmD Technik has been market leaders for tuning Audi, VW, SEAT, Skoda and Porsche for more than 20 years.

The company has been able to extract considerably more power compared with a standard car, giving more drivability and, above all, economy.

The economy is achieved by giving the car much more torque in the areas that matter. This increase in mid-range power allows the driver to achieve normal driving speeds without having to be so heavy on the accelerator.

Both diesel and petrol cars can be remapped to run more efficiently and, in most cases, increase the time between refills.

AmD Technik has invested heavily over the past two years to enable it to look at overall performance tuning - performance being not only power

but fuel efficiency. With a true ECU remap, it can tailor a car's performance to suit the customer's requirements.

The company's software products enhance power, torque, responsiveness and flexibility while delivering smooth, reliable and economical performance across the entire rev range.

As AmD's products are software orientated there are no invasive ECU modifications, add-on modules or any other hardware to attract attention.

Before any ECU upgrade, the vehicle will undergo an extensive engine diagnostic health check using state of the art OEM equipment, all included in the price.

AmD Technik is at Monument Way West Industrial Estate in Woking. Call 01483 726001 or visit [www.amdtechnik.com](http://www.amdtechnik.com)

# LPG conversions slash costs

**ESTABLISHED** since 1996, Woking-based company Dual Fuel Systems is an LPGA approved conversion centre.

It is concerned with the conversion of petrol vehicles to LPG bi-fuel vehicles that lower carbon emissions and provide major savings in the form of reduced motoring costs.

Dual Fuel Systems converts nearly all types of petrol vehicle to allow them to run on liquefied petroleum gas (LPG).

LPG, or autogas, is a non-toxic, non-corrosive, lead-free fuel that is the cheapest viable road fuel on the market available at 1,500 service stations in the UK, from suppliers such as Shell, BP, Total and Sainsbury's.

The company has noticed a significant upturn in demand for conversions due to the high cost of unleaded petrol and diesel, which offers motorists the opportunity to reduce their fuel bill by up to 40% with the current cost of LPG at under 60p a litre.

Other factors such as the decision by London Mayor Boris Johnson to continue the alternative fuel discount in London following the cancellation of the proposed CO2 emissions related congestion charging only confirms long-term support for the fuel from key decision makers.

This means certain vehicles that have passed tests on LPG will continue to be exempt

from the London Congestion Zone.

Conversion of a petrol vehicle costs on average £1,800 and the process takes five days at Dual Fuel Systems.

A new filling point is installed and an extra LPG fuel tank is fitted, normally in place of the spare wheel or in the boot, so the driver can choose to drive the vehicle on petrol or LPG at the push of a button.

For full information on LPG and to use the Dual Fuel Systems savings calculator, visit [www.dualfuelsystems.co.uk](http://www.dualfuelsystems.co.uk) or call 01483 728300.
